

# THIN VENEER

(Thin Brick Veneer)

INTERIOR INSTALLATION GUIDE USING THE   
'LATICRETE® MVIS™ SYSTEM'  
*Laticrete 15 year Product Warranty*

## Step 1: (Framed Installation) Install Cement Board

Install Perma Base cement board by National Gypsum (or equal) as per manufacturer's instructions.

## Step 1: (Masonry Wall Installation) Inspect Wall

Inspect concrete block and insure wall is clean of any dust, laitance, loose material and any excess film that could impede bond.

## Step 2: Apply Polymer Modified Thin-Set Mortar

Using a trowel, spread [Laticrete Thin Brick Mortar](#) across substrate in an upwards direction with the flat side of the trowel. Run notched side of the trowel across mortar to create a grooved finish. Apply only a workable area of mortar that will allow veneer to be properly set before surface drying occurs. This area will vary depending on site environmental conditions.

**NOTE: Do not substitute Laticrete with any other product or material.**

## Step 3: Install Thin Brick Veneer Units

Clean unit backs of any dust, laitance, loose material and any excess film that could impede bond. With a trowel "back-butter" the veneer units, if required to fill any surface irregularities or to ensure 100% coverage. Beginning with the corner pieces, work either from the top-down, or bottom-up. Press the corner piece onto the wall, rotating back and forth slightly, and forcing some of the mortar to "squeeze out". Remove this excess mortar with a square flat trowel and use the excess on the next piece of veneer. Remove excess mortar from around or on the veneer units with a stiff brush. Check for 100% mortar coverage by removing two stone units from the wall per bag of mortar used. Grout the joints using [Laticrete Pointing Mortar](#) using a grout bag. Tool joints when thumbprint hard using a metal jointing tool.
