

# Webinar Wednesdays

Webinar Wednesdays are back! We are pleased to offer our courses online once again. We will repeat some of our popular webinars for those that missed them the first time around, and we've also got new courses in the works. This time around we've invited industry partners to present as well, so we have even more to offer.

We invite architects, designers, technologists, masons and anyone interested in learning about Arriscraft and our partners. Webinar Wednesdays will allow access to our presentations on a computer, from anywhere in North America. Our courses are AIA accredited, and can also be used towards OAA learning credits

## Webinar Wednesdays Schedule:

Sign up for as many sessions as desired. After registering, you will receive a confirmation email that will contain information about how to join the webinar.

**September 9th, 2020, 12:30 pm, EDT**

Stone Designs

AIA Program Number: SD

LU Hours 1.00 / HSW

**Register:** <https://attendee.gotowebinar.com/register/123928563816505358>

In this presentation we will discuss the formation of natural stone and compare that with the natural process technology of manufacturing Calcium Silicate Stone Units. Architectural detailing for stone masonry veneers promoting moisture management principles and considerations for control of movement in masonry walls is covered. A variety of design styles incorporating stone masonry materials are highlighted.

**September 23rd, 2020, 12:30 pm, EDT**

Proper Masonry Detailing & Techniques

AIA Program Number: PMD

LU Hours 2.00 / HSW

**Register:** <https://attendee.gotowebinar.com/register/2940131885295003406>

In this presentation we discuss the design and construction factors that impact the long term performance of masonry veneer. Architectural detailing for stone masonry veneers promoting moisture management principles and considerations for control of movement in masonry walls are covered. This presentation reviews construction considerations for hot & cold weather masonry work, site storage and handling, mortar mixing, and more.

**October 7th, 2020, 12:30 pm, EDT**

“Thermally Broken” Shelf Angles **NEW**

(Presented by Fero Corp)

AIA Program Number: OOUOA1

LU Hours 1.00 / HSW

**Register:** <https://attendee.gotowebinar.com/register/6308070141591833358>

Requirements for continuous insulation in above-grade wall assemblies are becoming more common to meet energy codes and energy efficiency programs that continue to shift the industry toward more stringent thermal performance standards.

This presentation will focus on thermally efficient methods for masonry cladding supports.

**October 21st, 2020, 12:30 pm, EDT**

The Changing Landscape of Thin Adhered Masonry Veneers

AIA Program Number: CLAVI2

LU Hours 1.00 / HSW

**Register:** <https://attendee.gotowebinar.com/register/9196179324503274766>

We will discuss Thin Adhered Masonry Veneer and the wide variety of potential uses for them including new and renovation applications. We will cover how to meet the requirements of the Energy Code when utilizing these assemblies.

**November 4th, 2020, 12:30 pm, EDT**

Pushing The Envelope – Continuous Insulation Solutions for Thin Adhered Masonry Veneers

AIA Program Number: PTEICB

LU Hours 1.00 / HSW

**Register:** <https://attendee.gotowebinar.com/register/5734980491938851598>

We will discuss and explore Engineered and Tested Continuous Insulation (CI) solutions for thin adhered masonry veneers to meet the requirements of the Energy Code anywhere in North America.

**November 18th, 2020, 12:30 pm, EDT**

Proper Thin-Adhered Masonry Veneer Detailing for the Modern Age and Energy Codes **NEW**

AIA Program Number: PTAMD

LU Hours 2.00 / HSW

**Register:** <https://attendee.gotowebinar.com/register/7502067201588978958>

We will expand on previously presented detailing concepts and look at how to properly detail exterior wall assemblies with continuously insulated thin adhered masonry veneers that meet the requirements of the Energy Code.

In this presentation we will consider concepts like moisture movement (wind driven, capillary, condensation) and related details, such as “At Grade” details, Window sills, heads and jambs, deflection joints, movement joints, and parapet details as well as some other special details.

**December 2nd, 2020, 12:30 pm, EDT**

Protected Membrane Roof Systems **NEW**

(Presented by T-Clear)

AIA Program Number: T037CES02

LU Hours 1.00 / HSW

**Register:** <https://attendee.gotowebinar.com/register/2643674963144534030>

Provides a comparison of the functional and physical features of PMR systems to conventional low-slope roofing applications. Includes a discussion about the ASCE 7 standard and its impact on wind uplift design and how weather events such as hail impact roof design.

**December 16th, 2020, 12:30 pm, EDT**

Just Hanging Out on the Wall – Masonry Rainscreens

AIA Program Number: JHMR2

LU Hours 1.00 / HSW

**Register:** <https://attendee.gotowebinar.com/register/4829854823372305678>

To discuss Masonry Veneer Rainscreens and the wide variety of potential uses for them including new and renovation applications. This course covers how to meet the requirements of the Energy Code when utilizing these assemblies.
