

## FOR IMMEDIATE RELEASE

### New, comprehensive Thin-Clad Brochure

Arriscraft, a General Shale Company, manufacturer of all-natural products which emulate actual quarried stone, has produced a new brochure which showcases its thin-adhered veneer products and explains their extensive benefits in great detail. It is available upon request, and as a free download from [arriscraft.com](http://arriscraft.com), to those in the architectural & design, builder, specifier, masonry, and developer sectors.

Arriscraft Thin-Clad products include ARRIS.tile, ARRIS.stack (units which adhere to a suitable solid substrate) and ARRIS.clip (units 'clipped' to a substrate using a channel system). Versatile and easy to install, these materials offer a highly attractive, cost-efficient alternative to natural quarried stone. Arriscraft's exclusive production method ensures remarkably natural and unique color ranges and striations, making this product line ideal for both new construction and renovation projects.

All Arriscraft Thin-Clad units maintain "Green" product and design philosophies, because they offer lower embodied energy, reduced transportation costs and a zero-emitting finish for healthy interior spaces. When installed correctly and maintained properly, Arriscraft warrants its thin-clad products for the entire life of the building.

ARRIS.tile, ARRIS.stack and ARRIS.clip Thin-Clad corner units complement and retain the look of full bed stone installations. In addition, sills, caps, water tables and bullnose profiles are available to complete the overall stone veneer. All of this and much more is available in the new brochure.
